ARRESTS "Y" WORKER WHEN

Plends Wenpon Was Brought Home as Souvenir—Shows It to Policeman.

NEW YORK, Feb. 26.—A weapon which could easily be concealed in the palm of a man's hand and which which the palm of a man's hand and which the palm of the p palm of a man's hand and which was described as a "kamerad gun," because it was used by Germans after holding up their hands in token of surrender to shoot their American captors, was displayed in court today by Alexander P. Watson, a Y. M. C. A. secretary of Knoxville, Tenn, as the reason for his arrest. Watson, who arrived in the city to-day, couldn't resist the temptation to show the weapon to a policeman, who promptly arrested him as a violator of New York's Sulitivan law against carrying concealed weapons.

him as a violator of New York's Sullivan law against enrrying concealed weapons.

Watson testified he arrived at Newport News, Va., from France last Tuesday and brought back the gun as a souvenir. He was wounded twice and gassed once while serving as a Y. M. C. A. representative with the Ninth Regular Infantry, and received the second wound, from the "kamerad gun he now carries, he said.

Agricultural Workers Meet.

IRV Association of Southern Agricultural Workers opened a three days' session here today. H. W. Barrett, director of the experiment station, Clemson College, S. C., responded on behalf of the Ede delegates to an address of welcome. J. E. Duggar, head of the extension service at Auburn, president of the absociation, delivered an address, in which he said the purpose of the meeting was to develop plans for co-ordination work among the agricultural institutions and farmers in the South.

LONDON. Feb. 26.—England at last awaking out of her long industrial tumber and this is evidenced parcularly in her proposed application of science to every branch of industry.

One of the great schemes for the interpretation of electricity, and the Board of rade electricity and the provides which are only a few examples of the thousand and one valuable by-products which are obtainable from coal in the manufacture of gas, and which in the past have been allowed to run to waste to a large extent.

Apart from its incalculable aid to every branch of industry when in the future the utmost maximum of production will be needed.

WILL CHEAPEN ELECTRICITY Specialize in Coal Tar and Its

LONDON, Feb. 26.—England at last is awaking out of her long industrial slumber and this is evidenced par-ticularly in her proposed application of science to every branch of indus-

One of the great schemes for the future provides for the more general use of electricity, and the Board of Trade electric bill, shortly to be introduced into the House of Commons, is an carnest of progressive industrial reform. The bill has the strongest support of Premier Lloyd George, who in outlining his reconstruction program placed the cheapening and greater-use of electricity among the things to be attempted in the near future.

A Board of Trade official states that as things stand at present there are in Great Britain some 690 undertakings authorized to supply electric power, and some of these are small cencerns with plant which, in the light of modern requirements, must be regarded as obsolete. Electricity even as an illuminant is far preferable to gas, and only its dearness over gas has prevented it from being universally used. In the ordinary domestic household its use as power has been extremely limited, but in this "golden electric age" to come every housewife will possess a motor of her own, which can be switched on or off as necessity requires for the performance of all sorts of household drudgeries. This will not only enable the mistress of the house to get through her customary household duties in half the time, but give her more leisure for reading and culture generally.

the world. And England has in the past been largely dependent upon Germany for their supply.

The profits from the sale of these essential by-products will be enormous, and will, it is proposed in the iture, be devoted to reducing the cost of the current to the consumer. Commenting on this aspect of the question an expert says, "in fuel and factory costs alone it is understood that a saving of at least \$500,000,000,000 will be effected next year."

One of the most valuable of these by-products is coal-tar. Coal-tar a thick, black, opaque liquid, is used in many industrial ways, and as far back as 1782 was used as a means for preventing ships from rotting.

From the same substance are obtained aniline dyes, which are of immense commercial value and were practically a German monoply before the war. that corn stops hurting, then you lift it right out. Yes, magic!

A tiny bottle of Freezone costs but a few cents at any drug store, but is sufficient to remove every hard corn, soft corn, or corn between the toes, and
